4 CH REMOTE CONTROL QUADCOPTER

Quadcopter with six-axis gyro built in

Parts name

Introduction of transmitter

Long press video
short press to take pictures
(WIFI version of this key has no function)

1. In case that the quadcopter might descend on a further or insecure zone due to the insufficient battery power when flying outdoors, the quadcopter is specially designed with the function of secure warning. When the battery power is insufficient, the Led light would turn from constant light to flashing. Then player may have time to take back the quadcopter and change the battery or recharge for the next flight.

1. Mobile phone rack

Pull out the remote control lower bracket, clamp the phone.

2. 2.4G frequency

Open the aircraft power switch, the aircraft placed in the flat Ground, then the aircraft indicator light flashes, open the remote control power. Source switch, the throttle joystick pushed to the highest after the pull to the lowest, Buzzer prompt "tick" sound! The aircraft indicator light is on, right Frequency to complete, then you can take off!

3. A key to start and a key landing

Tip: This product is determined by the barometer. In a variety of environmental temperature and other factors, The aircraft will automatically start when flying or low voltage. Appear high and low changes are normal!

Note: If the aircraft is in automatic take-off state, indicating that the aircraft is not high barometer calibration, press a button to restart the remote control after landing 1, 2 repeat the operation.

Remote control battery installation:

Remote control battery installation:

As shown in the figure according to the electrode box electrode instructions (+ / -) Place the battery correctly (as shown).

1. Use a USB cable to connect the computer to charge: The USB charging terminal is connected to the aircraft battery outlet, and the other end can be connected to the computer's USB port. The battery indicator lights when charging and turns off when it is fully charged. Charging time is about 180 minutes.

2. Connecting the aircraft power supply: Put the charged battery into the battery holder of the aircraft, and then place the battery plug at the power supply on the vehicle into the socket for power connection, connected to open the aircraft power, then the aircraft lights.

The knowledge and safety notes below are useful for you in the remote control world. Please read this manual carefully before operating this product and keep it for further reference.

4. Flight control

A. Throttle (left lever)

B. Forward and backward (right lever) (with camera front side)

C. Left and right side fly

D. Turn left and right (with camera front side)

5. Fine-tuning control (with camera front side)

The remote control controls the recording

Long press video, short press to take pictures (WIFI version of this key has no function)

Speed selection

Speed file is to advance, back and left and right side of the flight is divided into third gear speed, the remote control is turned on by default when the slow power, press the remote control button issued a "flute" "flute" twice as midfielder, "flute" "Flute" press three times for the fast file, "flute" soon return to slow file. (Recommended beginners with slow operation)

A key return

Press a key return, the aircraft will give up their own front and rear left and right direction, automatically defined by the headless mode of backward direction of flight, when the control of the right lever when the stop this function

* Note: This feature can only be done automatically and the flight can not be reached automatically.

Directional definition and mode selection of headless mode

When converting to headless mode, the aircraft will give up its front and rear azimuths, and reposition the front and rear with the remote control as a reference point. Such as: when the right lever to push forward, the aircraft will fly away from the remote control; when the right lever to pull back, the aircraft will fly to the remote control. (With camera front side)

front Head forward

1. The direction of the direction before departure: of the aircraft forward in front of you, (With the camera side for the front) remote control to the end of the direct flight and then press a key. Take off, that is, to complete the flight head mode direction definition.
2. When flying by the headless mode of the remote control issued a "flute, flute" twice, the aircraft light flashing into the headless mode. And then press the remote control issued a "flute" sound Exit the headless mode.

Common problem and solution instruction:

The problem	Reason	Countermeasures
The indication light of the quadcopter is flashing and without reaction when operated	1. Frequency modulation between the quadcopter and remote control is not operated correctly. 2. Insufficient battery power	1. Refer to the Preparation for taking off, and re-modulate the frequency. 2. Recharge the battery
The quadcopter's blades turn around but the quadcopter cannot take off	1. insufficient battery power 2. the blades distorted	1. Recharge the battery 2. Replace the blades
The quadcopter shakes hardly	The blades distorted	Replace the blades
The fine tuning button are all on but the quadcopter still couldn't keep balance	1. The blades distorted 2. The motor doesn't work properly	1. Replace the blades 2. Replace the motor
The quadcopter becomes out of control after crashing	Three-axis acceleration sensor lose its balance after crashing	Put the quadcopter on the ground for 5-10 seconds.

Controlling operation of WiFi connection mobile

WiFi connecting steps and using ways of iOS mobile software

1. Download and install the software

Please download and install the software YH-FPV in App Store or directly download and install it by scanning the two-dimension code (Figure1).

Figure1

2. WiFi Connection Instruction

1. Connect the aircraft power and the blue indicator of the WiFi module will flash.
2. Enter the setting of iPhone or iPad and open WiFi to find out YH-FPV and connect. When the mark "✓" appears means successful connection, exit the setting after finishing.
3. Open the software YH-FPV in iPhone or iPad, click the icon to enter the controlling interface.
(Please keep away from other WiFi signals as far as possible when flying.)

WiFi connecting steps and using ways of Android mobile software

1. Download and install the software

Foreign users in the Play Google search YH-FPV download and install. download and install. Foreign users in search of 360 mobile assistant search HT-WiFi download and install.

Or directly scanned two-dimensional code for download and installation (Figure 2)

Also directly download Apple or Android directly on the company's website DW APP (Figure 3)

Figure3

2. WiFi Connection Instruction

1. Connect the aircraft power, and the blue indicator on the WiFi module will flash.
2. Enter the setting of Android mobile and open WiFi to find out WiFi-xxxx and connect it.
3. Open the software YH-FPV and click the icon to use it.
4. Please refer to the detailed operation instruction of iPhone operation instruction.
